

ABSTRACT OF THE DISCLOSURE

A hypertext displaying apparatus is provided. When a link destination indicated in stored data is designated, a processing section 104 instructs a transmission/reception section 103 to download hypertext data at the link destination, and instructs a history storage section 110 to register an identifier ID of the currently-displayed stored data. If a user gives a "previous content" instruction, the processing section 104 reads from a stored information storage section 111 the stored data corresponding to the identifier ID registered in the history information storage section 110, so that the stored data is displayed on a screen.
